

$$1) A(4/10/0) \quad B(4/6/0) \quad C(0/6/0) \quad D(0/0/0) \quad E(4/10/3) \\ F(4/6/3) \quad G(0/6/3) \quad H(0/0/3) \quad I(4/3/0) \quad J(2/6/0) \quad K(4/6/1,5)$$

$$\vec{BH} = \vec{OB} + r \cdot (\vec{OH} - \vec{OB}) = \begin{pmatrix} 4 \\ 6 \\ 0 \end{pmatrix} + r \begin{pmatrix} -4 \\ -6 \\ 3 \end{pmatrix}$$

$$\vec{FH} = \vec{OF} + s \cdot (\vec{OH} - \vec{OF}) = \begin{pmatrix} 4 \\ 6 \\ 3 \end{pmatrix} + s \begin{pmatrix} -4 \\ -6 \\ 0 \end{pmatrix}$$

$$\vec{IH} = \vec{OI} + t \cdot (\vec{OH} - \vec{OI}) = \begin{pmatrix} 4 \\ 3 \\ 0 \end{pmatrix} + t \begin{pmatrix} -4 \\ -3 \\ 3 \end{pmatrix}$$

$$\vec{GJ} = \vec{OG} + u \cdot (\vec{OJ} - \vec{OG}) = \begin{pmatrix} 0 \\ 6 \\ 3 \end{pmatrix} + u \begin{pmatrix} 2 \\ 0 \\ -3 \end{pmatrix}$$

$$2) g: \vec{x} = \begin{pmatrix} 4 \\ 7 \\ 1 \end{pmatrix} + r \begin{pmatrix} 2 \\ 1 \\ -2 \end{pmatrix} \quad E: 2x - 2y + z = 8$$

Parameterform von g:

$$\begin{array}{ll} \text{I} & x_1 = 4 + 2r = x \\ \text{II} & x_2 = 7 + r = y \\ \text{III} & x_3 = 1 - 2r = z \end{array}$$

einsetzen in E:

$$\begin{aligned} E: 2(4+2r) - 2(7+r) + (1-2r) &= 8 \\ (8+4r) - (14+2r) + (1-2r) &= 7 - 0r = \cancel{8} \Rightarrow 0r = -1 \\ &\text{parallel} \end{aligned}$$
